

Interborough Express

The MTA continues to advance the design phase of the Interborough Express (IBX). During this work, engineers transform conceptual ideas into detailed plans, which will eventually lead to a project that we can build. This is a multi-year process that expands on previous planning and the environmental work currently underway.

As the design phase continues, you may see MTA crews and contractor staff working periodically within the project corridor to collect technical data to inform project design. Activities may include collecting soil samples, performing site visits, and documenting existing conditions (what's out there today). This work began in fall 2025 and is expected to continue through fall 2026.

We want to hear from you!

Help shape the Interborough Express.

About IBX

The IBX is a transformative rapid transit project that will connect currently underserved areas of Brooklyn and Queens. It will substantially cut down on travel times between the two boroughs, reduce congestion, and expand economic opportunities for the people who live and work in the surrounding neighborhoods.

By the numbers

The exact station locations and connections will be confirmed as part of the design phase.

18

IBX stations

13

IBX stations with subway transfers

17

Subway lines connecting with IBX

50+

Current bus route connections

LIRR

Connections at East New York & Woodside Avenues
